March 6, 2020

Dear TCCS Community,

Following up on my message from the beginning of this week, I wanted to provide another update on the topic of the Coronavirus (COVID-19).

Earlier this week, I was on a conference call with Governor Murphy, New Jersey Department of Health Commissioner Judith Persichilli, Education Commissioner Lamont Repollet, and educational leaders from around the state to discuss Coronavirus preparedness and preventative measures in all of our schools.

During the call, and in the Department of Education's follow up information and guidelines, they indicated that the qualifications for receiving the Coronavirus test are very specific and that mandated testing of students who recently traveled abroad would not be feasible or necessary. As of this week, anyone returning from China would be subject to a self-imposed 14 day quarantine. However, the CDC is not recommending that those who have traveled to any other affected areas be screened, monitored, or excluded from work or school, but they are encouraged to self monitor for symptoms and follow the standard school policies regarding sickness.

In regards to symptoms, they advised that they can range from mild to severe and many times they are indistinguishable from influenza and even the common cold. Most, if not all of those who may be most greatly impacted are those patients who are older and with pre-existing conditions. It was stated that the younger the child, the less likely of contracting and the more immune, and if contracted, the milder the symptoms.

As with any of our students, Nurse Roda maintains a log of nurse visits and absences and I have been touching base with her daily to keep an eye out for any unusual or elevated number of illnesses being reported. At this time, we have not seen anything out of the ordinary. However, we will continue to monitor the situation.

Additionally, we continue to encourage everyone to follow everyday preventative actions to help prevent the spread of respiratory viruses, such as washing hands regularly; covering coughs and sneezes with the inner elbow; avoiding touching your eyes, nose, or mouth with hands; and remaining home from work or school if you have a fever.

We are also viewing this as a teachable moment and have fostered an open dialogue regarding this virus to ensure that students have an understanding of what it actually is through curricular resources such as: <https://www.brainpop.com/health/diseasesinjuriesandconditions/coronavirus/> We encourage families to do the same and offer the attached resource on “Talking to Children About COVID-19 (Coronavirus)” to help keep them at ease and to answer any questions that you or they may have about the developing situation.

As a precautionary measure, members of our maintenance crew will be disinfecting the entire building this weekend and we have placed orders to ensure that our stock of soap, hand sanitizers, and disinfecting wipes stay at appropriate levels.

As Governor Murphy said on the call earlier this week, this is not a time to panic, but it certainly is a time to prepare. Please know that we take the health and safety of our students and staff very seriously and will continue to follow the guidance of the DOE and Health Department to deal with this situation as best as we possibly can.

As stated in my March 2 message, if and when more information becomes available to us, we will share it with the community. In the meantime, we continue to encourage our families and staff to be diligent in adhering to commonsense healthy practices and utilize sound resources like the Centers for Disease Control and the New Jersey Department of Health for factual and timely information.

As always, please feel free to reach out with any questions.

Thanks and Best Regards,

Talking to Children About COVID-19 (Coronavirus) A Parent Resource

A new type of coronavirus, abbreviated COVID-19, is causing an outbreak of respiratory (lung) disease. It was first detected in China and has now been detected internationally. While the immediate health risk in the United States is low, it is important to plan for any possible outbreaks if the risk level increases in the future.

Concern over this new virus can make children and families anxious. While we don't know where and to what extent the disease may spread here in the United States, we do know that it is contagious, that the severity of illness can vary from individual to individual, and that there are steps we can take to prevent the spread of infection. Acknowledging some level of concern, without panicking, is appropriate and can result in taking actions that reduce the risk of illness. Helping children cope with anxiety requires providing accurate prevention information and facts without causing undue alarm.

It is very important to remember that children look to adults for guidance on how to react to stressful events. If parents seem overly worried, children's anxiety may rise. Parents should reassure children that health and school officials are working hard to ensure that people throughout the country stay healthy. However, children also need factual, age appropriate information about the potential seriousness of disease risk and concrete instruction about how to avoid infections and spread of disease. Teaching children positive preventive measures, talking with them about their fears, and giving them a sense of some control over their risk of infection can help reduce anxiety.

Specific Guidelines

Remain calm and reassuring.

- Children will react to and follow your verbal and nonverbal reactions.
- What you say and do about COVID-19, current prevention efforts, and related events can either increase or decrease your children's anxiety.
- If true, emphasize to your children that they and your family are fine.
- Remind them that you and the adults at their school are there to keep them safe and healthy.
- Let your children talk about their feelings and help reframe their concerns into the appropriate perspective.

Make yourself available.

- Children may need extra attention from you and may want to talk about their concerns, fears, and questions.
- It is important that they know they have someone who will listen to them; make time for them.
- Tell them you love them and give them plenty of affection.

Avoid excessive blaming.

- When tensions are high, sometimes we try to blame someone.
- It is important to avoid stereotyping any one group of people as responsible for the virus.
- Bullying or negative comments made toward others should be stopped and reported to the school.
- Be aware of any comments that other adults are having around your family. You may have to explain what comments mean if they are different than the values that you have at home.

Monitor television viewing and social media.

- Limit television viewing or access to information on the Internet and through social media. Try to avoid watching or listening to information that might be upsetting when your children are present.
- Speak to your child about how many stories about COVID-19 on the Internet may be based on rumors and inaccurate information.
- Talk to your child about factual information of this disease—this can help reduce anxiety.
- Constantly watching updates on the status of COVID-19 can increase anxiety—avoid this.
- Be aware that developmentally inappropriate information (i.e., information designed for adults) can cause anxiety or confusion, particularly in young children.
- Engage your child in games or other interesting activities instead.

Maintain a normal routine to the extent possible.

- Keep to a regular schedule, as this can be reassuring and promotes physical health.
- Encourage your children to keep up with their schoolwork and extracurricular activities, but don't push them if they seem overwhelmed.

Be honest and accurate.

- In the absence of factual information, children often imagine situations far worse than reality.
- Don't ignore their concerns, but rather explain that at the present moment very few people in this country are sick with COVID-19.
- Children can be told this disease is thought to be spread between people who are in close contact with one another—when an infected person coughs or sneezes.
- It is also thought it can be spread when you touch an infected surface or object, which is why it is so important to protect yourself.
- For additional factual information contact your school nurse, ask your doctor, or check the <https://www.cdc.gov/coronavirus/2019-ncov/index.html> website.

Know the symptoms of COVID-19.

- The CDC believes these symptoms appear in a few days after being exposed to someone with the disease or as long as 14 days after exposure:
 - Fever
 - Cough
 - Shortness for breath
- For some people the symptoms are like having a cold; for others they are quite severe or even life threatening. In either case it is important to check with your child's healthcare provider (or yours) and follow instructions about staying home or away from public spaces to prevent the spread of the virus.

Review and model basic hygiene and healthy lifestyle practices for protection.

- Encourage your child to practice every day good hygiene—simple steps to prevent spread of illness:
 - Wash hands multiple times a day for at least 20 seconds (singing Twinkle, Twinkle Little Star slowly takes about 20 seconds).
 - Cover their mouths with a tissue when they sneeze or cough and throw away the tissue immediately, or sneeze or cough into the bend of their elbow. Do not share food or drinks.

- Practice giving fist or elbow bumps instead of handshakes. Fewer germs are spread this way.
- Giving children guidance on what they can do to prevent infection gives them a greater sense of control over disease spread and will help to reduce their anxiety.
- Encourage your child to eat a balanced diet, get enough sleep, and exercise regularly; this will help them develop a strong immune system to fight off illness.

Discuss new rules or practices at school.

- Many schools already enforce illness prevention habits, including frequent hand washing or use of alcohol-based hand cleansers.
- Your school nurse or principal will send information home about any new rules or practices.
- Be sure to discuss this with your child.
- Contact your school nurse with any specific questions.

Communicate with your school.

- Let your school know if your child is sick and keep them home. Your school may ask if your child has a fever or not. This information will help the school to know why your child was kept home. If your child is diagnosed with COVID-19, let the school know so they can communicate with and get guidance from local health authorities.
- Talk to your school nurse, school psychologist, school counselor, or school social worker if your child is having difficulties as a result of anxiety or stress related to COVID-19. They can give guidance and support to your child at school.
- *Make sure to follow all instructions from your school.*

Take Time to Talk

You know your children best. Let their questions be your guide as to how much information to provide. However, don't avoid giving them the information that health experts identify as critical to ensuring your children's health. Be patient; children and youth do not always talk about their concerns readily. Watch for clues that they may want to talk, such as hovering around while you do the dishes or yard work. It is very typical for younger children to ask a few questions, return to playing, then come back to ask more questions.

When sharing information, it is important make sure to provide facts without promoting a high level of stress, remind children that adults are working to address this concern, and give children actions they can take to protect themselves.

Information is rapidly changing about this new virus—to have the most correct information stay informed by accessing <https://www.cdc.gov/coronavirus/2019-ncov/index.html>.

Keep Explanations Age Appropriate

- Early elementary school children need brief, simple information that should balance COVID-19 facts with appropriate reassurances that their schools and homes are safe and that adults are there to help keep them healthy and to take care of them if they do get sick. Give simple examples of the steps people take every day to stop germs and stay healthy, such as washing hands. Use language such as “adults are working hard to keep you safe.”
- Upper elementary and early middle school children will be more vocal in asking questions about whether they truly are safe and what will happen if COVID-19 comes to their school or community. They may need assistance separating reality from rumor and fantasy. Discuss efforts of school and

community leaders to prevent germs from spreading.

- Upper middle school and high school students are able to discuss the issue in a more in-depth (adult-like) fashion and can be referred directly to appropriate sources of COVID-19 facts. Provide honest, accurate, and factual information about the current status of COVID-19. Having such knowledge can help them feel a sense of control.

Suggested Points to Emphasize When Talking to Children

- Adults at home and school are taking care of your health and safety. If you have concerns, please talk to an adult you trust.
- Not everyone will get the coronavirus (COVID-19) disease. School and health officials are being especially careful to make sure as few people as possible get sick.
- It is important that all students treat each other with respect and not jump to conclusions about who may or may not have COVID-19.
- There are things you can do to stay health and avoid spreading the disease:
 - Avoid close contact with people who are sick.
 - Stay home when you are sick.
 - Cover your cough or sneeze into your elbow or a tissue, then throw the tissue in the trash.
 - Avoid touching your eyes, nose, and mouth.
 - Wash hands often with soap and water (20 seconds).
 - If you don't have soap, use hand sanitizer (60–95% alcohol based).
 - Clean and disinfect frequently touched objects and surfaces using a regular household cleaning spray or wipe.
